

Reassess Antibiotics at 48 Hours

48 hours after starting an antibiotic, review clinical, laboratory, and microbiological data

Ask Yourself:

1. Can I stop antibiotics?

If not, what is the projected duration of antibiotics?

2. Did I choose the right antibiotic?

Can I narrow or do I need to broaden coverage?

3. Can I move to oral administration?

**There's no excuse
for overuse.**

**Take a stand against
antibiotic resistance.**
