

SOCO - Vaccine Preventable Disease

There are diseases right here in LA County that can be deadly to pets.

- Over 700 dogs had parvo in our county in 2013.
- Every year cats die in our county from panleukopenia.
- There are often over 30 rabid bats in our county every year.

You have the power to protect your pet.

- Keep puppies and kittens safe at home so they do not catch germs.
- Just like kids, puppies and kittens need shots to prevent disease.
- Prevention saves money - shots cost less than treatment.

One shot is not enough.

- Pets need shots more than one time to be protected.
- “Give me three!” Puppies and kittens need to get a series of 3 shots to get them started.
- Get the shots again a year later (booster) and then every three years for life.
